

Use Case #1:

Actor : A user

Actor Goal : to get a recommendation

Problem : As a user, I am going on a date tonight. I would be flying to a different city for a date and I do not know what the weather is like and what should I pack so that I am able to wear the most appropriate dress according to the occasion.

Steps:

1. The user logs into vogueX account.
2. The user should be able to get recommendations on what to wear based on the occasion he/she wants
3. The user would input the occasion name or can put a occasion query and would get recommendations in the form of photos in a carousel.

Use Case #2

Actor : A user

Actor Goal : to make a fashion profile

Problem : As a user I would like to create a fashion profile, so that I can understand what clothes do people wear in different occasions and get some new ideas.

Steps:

1. The user decides to make a fashion profile
2. The user logs on vogueX and clicks on signup
3. The user is redirected to the signup page where he/she have to put some details in a form.
4. The user is redirected to a page where the user has to give some preferences and can see different options to give preferences.

Use Case #3

Actor : A user

Actor Goal : to get recommendations on preferences

Problem : As a user I would like to create a fashion profile and then get recommendations on my preferences so that I am able to find newer and better clothes.

Steps:

1. The user decides to login to vogueX
2. If the user has not given preferences, can go and update preferences.
3. The user after giving preferences, can give an occasion name and hit recommend to get fashion recommendations based on the preferences and the occasion.
